

To the FCC: XM Radio provides the most efficient, comprehensive traffic and weather reports that I have found in any US city that I have lived in or traveled to. Don't punish listeners who live by this important information on a daily basis, by siding with local stations. These stations choose to air more commercials than traffic, weather reports or even music. I, for one, had given up listening to radio until XM Radio came along. Please allow us the freedom of choice in our listening. It is critical that you reject the NAB's petition 04-160. Instead, demand that NAB stations upgrade the quality of their broadcasting. Satellite Radio is the future! Don't hold it back!
